

[RH134]: Red Hat System Administration II

Length : 5days
Delivery Method : Instructor-led (Classroom) / Virtual Live Training

Course Overview

Focuses on the key tasks needed to become a full-time Linux administrator.

Red Hat System Administration II (RH134) serves as the second part of the RHCSA training track for IT professionals who have taken Red Hat System Administration I (RH124). The course goes deeper into core Linux system administration skills in storage configuration and management, installation and deployment of Red Hat® Enterprise Linux®, management of security features such as SELinux, control of recurring system tasks, management of the boot process and troubleshooting, basic system tuning, and command-line automation and productivity. .

Experienced Linux administrators looking for rapid preparation for the RHCSA certification should instead start with RHCSA Rapid Track (RH199).

This course is based on Red Hat Enterprise Linux 8.2.

Audience Profile

This course is geared toward Windows system administrators, network administrators, and other system administrators who are interested in supplementing current skills or backstopping other team members, in addition to Linux system administrators who are responsible for these tasks:

- Configuring, installing, upgrading, and maintaining Linux systems using established standards and procedures
- Providing operational support
- Managing systems for monitoring system performance and availability
- Writing and deploying scripts for task automation and system administration

At Course Completion

Impact on the organization

This training provides your team members with a solid foundation in Linux system administration, helping ensure improved ability to manage your infrastructure efficiently. This helps provide better system reliability, improve efficient system and storage utilization, and faster and more accurate responsiveness to system failures. This is the second of a two course series that takes a computer professional from minimal Linux experience to being a fully capable Linux administrator.

Red Hat has created this course in a way intended to benefit our customers, but each company and infrastructure is unique, and actual results or benefits may vary.

Impact on the individual

As a result of attending this course, students should be able to perform the key tasks needed to become a full-time Linux administrator. Students will be introduced to more advanced administrative topics, such as storage management using LVM, SELinux management, and automated installation. This course goes deeper into enterprise Linux administration, including file systems and partitioning, logical volumes, SELinux, firewall configuration, and troubleshooting.

You should be able to demonstrate these skills:

- Install Red Hat Enterprise Linux using Kickstart
- Manage file systems and logical volumes
- Manage scheduled jobs
- Access network file systems
- Manage SELinux
- Control firewalls
- Perform troubleshooting tasks

Pre-Requisites

- Successful completion of Red Hat System Administration I (RH124) is recommended.
- Experienced Linux administrators seeking to accelerate their path toward becoming a Red Hat Certified System Administrator should start with the RHCSA Rapid Track course (RH199).
- Take our free assessment to gauge whether this offering is the best fit for your skills.

Course Outline

Module 1: Improve command line productivity

Lessons

- Run commands more efficiently by using advanced features of the Bash shell, shell scripts, and various utilities provided by Red Hat Enterprise Linux.

Module 2: Schedule future tasks

Lessons

- Schedule commands to run in the future, either one time or on a repeating schedule.

Module 3: Tune system performance

Lessons

- Improve system performance by setting tuning parameters and adjusting scheduling priority of processes.

Module 4: Control access to files with ACLs

Lessons

- Interpret and set access control lists (ACLs) on files to handle situations requiring complex user and group access permissions.

Module 5: Manage SELinux security

Lessons

- Protect and manage the security of a server by using SELinux.

Module 6: Manage basic storage

Lessons

- Create and manage storage devices, partitions, file systems, and swap spaces from the command line.

Module 7: Manage logical volumes

Lessons

- Create and manage logical volumes containing file systems and swap spaces from the command line.

Module 8: Implement advanced storage features

Lessons

- Manage storage using the Stratis local storage management system and use VDO volumes to optimize storage space in use

Module 9: Access network-attached storage

Lessons

- Use the NFS protocol to administer network-attached storage.

Module 10: Control the boot process

Lessons

- Manage the boot process to control services offered and to troubleshoot and repair problems.

Module 11: Manage network security

Lessons

- Control network connections to services using the system firewall and SELinux rules.

Module 12: Install Red Hat Enterprise Linux

Lessons

- Install Red Hat Enterprise Linux on servers and virtual machines.

Module 13: Run Containers

Lessons

- Obtain, run, and manage simple, lightweight services as containers on a single Red Hat Enterprise Linux server.

Note: Course outline is subject to change with technology advances and as the nature of the underlying job evolves. For questions or confirmation on a specific objective or topic, please contact enquiries@avantustraining.com.
